GRABER PULVER

*January 2021*

*Our discipline is architecture in its entirety; our work is the reflection of a competition culture that we have been supporting for years as participants, organizers and jurors. We are generalists and, as trusted partners of our clients, committed to develop sustainable values and create visionary contribution to the building culture. Naturally, we offer all architectural services, from the supervision of masterplans to a building completion. Experience in all delivery models, as well as new topics, such as Building Information Modeling (BIM), form our competency for the complex planning and realization process. The structure of our office and our culture of interdisciplinary work with third parties corresponds with our curiosity and, simultaneously, reflects the complexity of an ever-changing building industry. Teaching positions allow us to question our positions, expand our knowledge and to incorporate insights from research into our work. In doing so, 60–70 qualified employees in Zurich and Bern support us – talents and personalities from Switzerland and abroad.*

*Architecture is a supporting member of the building culture, it cannot cure social problems but it should raise questions, create identity, allow for identification. In equal measure we feel responsible for landscape and the European city, with its fragmented spaces. At the core of our architectural interest lie theoretical and practical questions of form finding and contextualisation. The result of a design process is the „gesture“, that expresses what an architectural design contains in its entirety through a specific „form“ or „stance“. Ambivalences and interplay between abstract programs and their physical or cultural context drive us along our path of exploratory design. In the process we solve the spatial potential and search for social relevance. Ideally, our design satisfies multiple requirements simultaneously and, through a profound body of knowledge, creates unforeseen elegant sustainable solutions, with a high urban, spatial and functional quality.*

## Marco Graber, partner

Dipl. Arch. ETH BSA SIA REGA

2016–2017	Visiting Professor at ETH Lausanne (EPFL)
2016	Member Jury Liang Sicheng Architecture Prize, Beijing
since 2010	Member of Foundation Board Research Planning Competitions, Zurich
2008–2013	Member of the City Building Commission of Lucerne
2006–2008	Visiting Professor at the Department of Architecture ETH Zurich
2004–2006	President of Local Group Bern in the BSA
2004	Founder and Partner of Graber Pulver Architekten AG
since 2001	Jury Member of various Competitions
2001–2016	Member of the Competition Commission SIA
2000–2001	Atelier Scholarship Canton Bern, Study Visit in New York
1994–1999	Diploma Assistant at Professor A. Meyer and R. Tropeano at ETH Zurich
since 1992	Activity as expert, guest critic and speaker at various universities
1992	Foundation of own architecture office with Th. Pulver in Bern/Zurich
1991–1993	Assistant at Professor Dolf Schnebli and Ruggero Tropeano, ETH Zurich
1990–1991	Collaborator at Cruz & Ortiz arquitectos in Sevilla
1989	Open Diploma at Prof. F. Oswald, A. Ortiz, J. Blumer, Prof. A. Corboz
1983–1989	Studies of Architecture at ETH Zurich
1962	born in Bern

## Thomas Pulver, partner

Dipl. Arch. ETH BSA SIA REGA

since 2020	Member of the Commission for Innovation (KfI) of the CRB
2016–2017	Visiting Professor at ETH Lausanne (EPFL)
since 2015	Member of Advisory Council at BFH Burgdorf, Dep. Architecture
since 2013	Consultant Mandate Town Planning Olten
2011–2020	Member of Foundation Board ESS/SPA, Swiss Plastic Exhibition, Biel
since 2008	Member of Editorial Board Commission 'as, architecture suisse', Lausanne
2006–2008	Visiting Professor at the Department of Architecture ETH Zurich
2004	Founder and Partner of Graber Pulver Architekten AG
2001–2013	Delegate of the BSA at D-ARCH, Dep. of Architecture ETH Zurich
2001–2008	Member Editorial Board Commission 'werk, bauen & wohnen'
2000–2001	Atelier Scholarship Canton Bern, Study Visit in New York
since 1992	Activity as expert, guest critic and speaker at various universities
1992	Foundation of own architecture office with M. Graber in Bern/Zurich
1991–2000	Associate Professor for Urban Analyzes (ZHAW Winterthur)
1991–1992	Assistant at Prof. Ernst Studer (ETH Zurich)
1991	Collaborator at Kündig Hubacher Bickel Architekten, Zurich
1990	Collaborator at Torres & Martinez Lapeña arquitectos, Barcelona
1989	Open Diploma at Prof. F. Oswald, A. Ortiz, J. Blumer, Prof. A. Corboz
1987	Internship at Hodgetts & Fung, Los Angeles
1982–1989	Studies of Architecture at ETH Zurich
1962	born in Bern

*Marco Graber and Thomas Pulver founded their own architecture office in 1992 after studying at ETH Zurich and collaborating with Cruz y Ortiz arquitectos, Sevilla (Marco Graber) and Torres-Martinez-Lapeña arquitectos, Barcelona (Thomas Pulver). In 1999 they were awarded with the New York Studio Scholarship of the Canton of Bern. Besides various teaching positions, among others at ETH Zurich and EPF in Lausanne, they are regular jury members of architectural competitions, commission members (BSA, SIA and more) as well as invited as experts or lecturers at various architectural universities in Switzerland and abroad.*

Photos: Walter Mair

*Since 2004 the office of Graber Pulver Architekten AG is a public company in the ownership of the four partners Marco Graber, Thomas Pulver, Thomas Winz and Alexander Huhle. Thomas Winz and Alexander Huhle are the heads of the two offices in Bern and Zurich. The four partners together with Cornelia Blickle (head of finance and human resources) and Hans-Peter Baumli form the company directorate.*

## **Thomas Winz, partner**

Dipl. Arch. HTL BSA / Office Manager Bern

2014	Board member of BSA Switzerland
since 2009	Member of Directorate, Office Manager Bern
2007–2008	CAS Project Management, university for tech. and arch., Lucerne
2006	form SIA; Project Management for Engineers and Architects
since 2004	Partner Graber Pulver Architekten AG
1998–2003	Collaborator at Graber Pulver Architekten, Office in Bern
1992–1997	Collaborator at Architectural Office Valentin und Partner, Bern
1991	Internship Studio BAUTON architects, Los Angeles
1988–1990	Collaborator at Architecture Office Otto Althaus, Bern
1985–1988	Studies of Architecture at Technikum Burgdorf
1980–1984	Drafting Apprenticeship at Architecture Office Lutstorf und Hans, Bern
1964	born in Bern

## **Alexander Huhle, partner**

Dipl. Ing. Arch. TH SIA / Office Manager Zurich

since 2013	Partner Graber Pulver Architekten AG
since 2009	Member of Directorate, Office Manager Zurich
since 2004	Collaborator at Graber Pulver Architekten AG, office in Zurich
2003–2004	Collaborator at Baurmann Architekten, Karlsruhe
2003	Open Diploma at University of Karlsruhe, Prof. A. Lederer/Prof. A. Janson
1996–2003	Studies of Architecture at University of Karlsruhe and Accademia di architettura, Mendrisio
1996–2001	Collaborator at Ruser+Partner, Karlsruhe
1995–1996	Collaborator at Georg Albrecht, Carpentry and Restoration, Rottweil (D)
1974	born in Tübingen (D)

## Hans-Peter Baumli

Dipl. Arch. ETH SIA

since 2019	Member of Directorate at Graber Pulver Architekten AG
since 2016	Project Management Esplanade Nord - Part West, Biel
2012–2018	Project Management Retirement Home Neuer Gehren, Erlenbach
2012	Certificate CAS: Purchaser competence – Project management and overall direction in building process
2010–2012	Project Management Housing Development Chriesimatt, Baar
2008–2010	Project Management Residential Development Schönberg Ost, Bern
since 2008	Collaborator at Graber Pulver Architekten AG
2004–2008	Collaborator at Adrian Streich Architekten AG, Zurich
2004	Collaborator at Architekturbüro Beda Dillier, Sarnen
2002–2003	Collaborator at GLS Architekten AG, Biel
2002	Diploma at Prof. Adrian Meyer, ETH Zurich
1998–1999	Collaborator at Architecture Office Andrea Bassi, Genf
1996–2002	Studies of Architecture at the ETH Zurich
1976	born in Sarnen, Obwalden

## Cornelia Blickle

Head of Finances and Human Resources

since 2015	Member of Directorate at Graber Pulver Architekten AG
since 2011	Head of Finance and Human Resources at Graber Pulver Architekten AG
2009–2010	edupool Certification SB Social Insurance (occupational training)
2007–2010	Dep. Manager Finances and Administration at economiessuisse Zurich
2006	Travel to Latin America
2002–2005	Advanced Training Expert in Finance and Accounting
1997–2005	Backoffice Manager / Accounting at Sercon AG, Männedorf (IT-Sector)
1999–2000	edupool Certification SB Finance and Accounting
1993–1997	Accounting at Brunner & Birgelen AG, Höri/Bülach (building sector)
1992	World Travel (New Zealand, South Sea, Central- and South America)
1990–1991	Assistant Hoval Herzog AG, Feldmeilen
1985–1989	Commercial Banking Apprenticeship at Rüd, Blass & Cie AG, Zurich
1969	born in Männedorf ZH

The three associates each manage multiple projects and are responsible for various areas across the two office locations: Daniel Jaeglé leads the area BIM (Building Information Modeling) and supervises its ongoing implementation in current projects. Sascha Höpfner manages the apprentice program and is responsible for quality control in the planning process. Andrea Bieri is responsible for cross-project architectural design. Mischa Trnka leads the department of competition and is the head of the competition team.

## ZHAW Campus Technikumstrasse, Stage I, Winterthur

<i>cooperation with Takt Baumanagement</i>	
Commission	competition 2018, 1 <sup>st</sup> prize
Realization	2022–2028
Client	Canton Zurich
Program	school, research & laboratory building, park redevelopment, undergr. parking
Visualization	maars Visualisierungen

*The first of 4 stages defines two new axes / The architectural expression of the re-placement building should reflect the ambition of technological innovation that defines the future work in the laboratories and workshops / On the basis of a building grid a highly flexible, modular spacial distribution should be established, that allows for various use-scenarios and can adapt to changing requirements / Thanks to a cantilever, the canteen building is connected with the park and creates a new central point in the area.*

## Schwamendinger-Dreieck, plot B, Zurich

Commission	competition 2019, 1 <sup>st</sup> prize
Realization	2023–2027
Client	BGZ Baugenossenschaft Glattal Zurich
Program	cooperative housing (200 apt.), 2 care facilities, retail, city and neighbourhood square, parking
Visualization	maars Visualisierungen

*In course of a densification of the garden city, the "Triangle Schwamendingen" has the role*

*of an exceptionally important urban hinge / At the tip of the triangle, a new part of city with a new identity and a high living-quality is being created / Two eight-story, offset buildings mark a strong double-figure that define the new "city square" / Towards the east, the buildings recede to five stories; two new living squares emerge laterally to the new middle-axis / The new through-living apartments with generous exterior spaces face mainly towards the south / The two care-centers are situated in an attractive spot in the middle of the development.*

## Regional Care Center Baden RPB, Baden

Commission	study comp. 2018, 1 <sup>st</sup> prize
Realization	2020–2026
Client	RPB, Baden
Program	urban/architectural reorganization with park, care department (300 beds), 81 senior apartments
Visualization	maars Visualisierungen

*As a framework for urban reorganization the design foresees an unshakeable ensemble of 4 orthogonally joined, precisely interlocked wings, that create differently used exterior spaces / The listed central Palace building from 1912 should get back its original character / In a quiet location, in a part, there are 3 six storey old-age-compatible buildings / A „rue intérieur“ connects the new wings and creates an enfilade of diverse common areas / With the inclusion of the old trees and traces of the historic garden, the park is translated into a new form and is gradually zoned in various levels of publicity.*

## Replacement Residential Development Hardau I, Zurich

Commission	open compet. 2018, 1 <sup>st</sup> prize
Realization	2021–2024
Client	City of Zurich
Program	122 cooperative apartments, kindergarten, commerce, ateliers, offices
Visualization	Nightnurse Images AG

*The project incorporates the dense program into a pronounced composition of two volumes with different heights and forms / A building slab along the Hardstrasse extends the building block and searches for a contextualization of scale with a change from 4 to 7 floors / The second building volume – accessible via a „rue intérieur“ – possesses a six storey, comb-like shape and extends into the depth of the site.*

## Residential Development Südhang, Herrenschwanden

Commission	direct commission after study 2018
Realization	2020–2022
Client	private
Program	4 twin houses, underground parking
Visualization	Graber Pulver

*At an exceptional viewpoint high above the Bremgarten-Aare-gorge new living room is created through exceptional architecture / The project "Südhang" foresees four elegant double-family houses with eight apartments – tailored living-typologies with added spatial value / Individual entrances lead to generous "living-landscapes" / The apartments stretch over multiple stories, creating spatial configurations with diverse views and qualities similar to single-family houses / Terraces between the buildings create public and private exterior spaces and at the same time form an acoustic barrier against the traffic noise.*

## Residential & Commercial Building Buergli-Areal, Zurich

Commission	study compet. 2012, 1 <sup>st</sup> prize
Realization	2022–2024
Client	Swisscanto Anlagestiftung (Zürcher Kantonalbank)
Program	124 apartments, commerce
Visualization	Raumgleiter GmbH

*Demands for representation, upmarket standards and urban living in a park are contrasted by noise pollution and the hard frontality of a long row house / The result is a specific typology of a serially arrayed, twisted apartments / The twist in the floor plan leads to larger side surfaces and all-aspect oriented apartment / What is perceived from the street, is a building that orientates itself to the building on the slope of the park..*

## Heat Supply Zurich-West, Heating Plant Josefstrasse, Zurich

Commission	Planer evaluation procedure 2014 with engineers
Realization	2019–2023
Client	ERZ Zurich
Program	conversion/reuse as part of extension Heat Supply Zurich-West

*The waste incineration power plant on Josefstrasse supplies the neighborhood Zurich-West with district heating and should be shut*

*down in 2020 / To maintain the heat supply and to add further areas with district heating, it is planned to connect this heating system with Zurich-North's.*

## Esplanade Nord, Part West, Biel

Commission	competition 2013, 1 <sup>st</sup> prize
Realization	2019–2022
Client	Allco AG (before: Alpine Finanz Immobilien AG)
Program	124 apartments, hotel (104 rooms), offices, retail, nursery care
Visualization	maars Visualisierungen

*The building structure of Biel is primarily dominated by the orthogonal street grid running parallel to the Jura mountain range / Towards the new Esplanade, a big urban square by Swiss standards, the project creates a seven storey, horizontally layered, long urban front, that develops its own specific identity through an undulating balcony-loggia layer / An arcade at the high ground floor as well as a two storey formulation of the attic lend an interesting disposition to this urban front / Differently aligned and designed courtyards define the project's interior and facilitate a differentiated use of the ground floor / Depending on the situation inside the blocks, different apartment types are created in order to make this new piece of city accessible to a wide range of users.*

## Residential Development Feldbreite, Plot C1, Emmen

Commission	evaluation procedure, award 2018, 1 <sup>st</sup> prize
Realization	2020–2022
Client	Develop Invest AG
Program	73 condominiums, underground parking

*Based on the guidelines of the master plan, an urban approach was developed, with four storey blocks, that are permeated by generous passageways that lead to an internal courtyard, which is brought to life by various activities / In a greater whole, a diversity of different forms of access, apartment types, and exterior spaces create the potential of identification.*

## Area Keller Ziegeleien, Plots IIa/IIIa, Winterthur-Dattnau

Commission	direct commission after study masterplan 2016
Masterplan	working group with Fischer Architekten AG / Krebs und Herde GmbH
Realization	2019–2021
Client	Keller Prefadom AG
Program	31 senior apartments, café (plot IIa), 51 condominiums (plot IIIa)

*At the transition of the settlement to the landscape, a new part of the city with about 260 apartments is planned / The masterplan, developed together with Krebs und Herde and Fischer Architekten, should be implemented in stages / South of the central „Ziegelei square“ is a five storey plastered building with senior apartments and a café (plot II) / Softly rounded balconies from precast concrete give the lightly plastered volume an air of elegance; the choice of materials and a precisely defined roof edge lead to a character of sophisticated craftsmanship.*

realization *project title – program – client*

*mandate / procurement*

## Geistlich-Areal Plot C1, Schlieren

Commission	study comp. 2015, 1 <sup>st</sup> prize
Realization	2017–2020
Client	Geistlich Immobilien AG
Program	215 apartments, care center (30 rooms), commerce, offices, underground parking
photo	Philip Heckhausen

The program for this openly designed city block in the former industrial area of Schlieren incorporates facilities for the elderly, attractive studio apartments by the park, apartment clusters for experimental forms of living in the tower as well as offices, stores and a cafeteria with a connectible multipurpose room / What the park does on a larger scale, the “rue intérieur” offers to the inside of the block: it connects the very diverse user groups and creates an internal meeting place / The construction with using solid bricks hints at the material’s traditional use for industrial buildings in the Limmat valley and correlates with the open building typology.

## Residential Development Sennhüttenstrasse, Birmensdorf

Commission	direct commission 2015
Realization	2018–2020
Client	Senn Ressources AG
Program	20 condominiums, 18 townhouses, underground parking
Photo	Georg Aerni

Based on our master plan from 2001 and in addition to the already existing semi detached houses in the upper part of the slope (i.a. from Graber Pulver), is a development of the four lower rows, that follow the terrain in a stepped manner / For the idyllic location directly on the foot of the church slope condominiums tailored for all phases of life were developed/ Overlooking the street are apartments and further up the slope are variously sized town houses with garden / The units are architecturally energized with double height spaces, split-level sections and changing staircases.

## Esplanade Nord, Part East, Biel

Commission	competition 2013, 1 <sup>st</sup> prize
Realization	2016–2018
Client	private
Program	160 apartments, retail, offices
Photo	Alexander Jaquemot

„Esplanade“ is the name of the newly established city park on the former area of a gas plant that introduces an unusual grand scale to Biel and creates an urban foreground to Max Schlups Congress Center / Part East together with Part West create the northern extend of the park / Both are multi-piece city block figures that complete the neighborhood and close it toward the park / The 7 storey, rhythmic facade with an arcade along its entire length of 300 m create a sort of a „baroque shield“ that communicates between the dimension of the park and the northern part of the city.

## Retirement Home Gehren, Erlenbach

Commission	competition 2011, 1 <sup>st</sup> prize
Realization	2016–2018
Client	Municipality of Erlenbach
Program	18 senior apartments, 61 care rooms, common rooms, underground parking
Photo	Georg Aerni

On a very complexly shaped plot in a morphologically and spatially heterogeneous situation, the form of the project communicates to the outside as well as to the inside / The rooms and apartments are combined to make “houses” and are arranged in a village-like conglomerate / The project requires 20 senior apartments and 60 studios for stationary and ambulatory care, arranged in care and living groups / The façade is made out of bright, prefabricated and perforated fiber cement elements that lend the building its almost textile appearance with a summerlike airiness.

## Residential Development Uhlmann-Areal, Bern

Commission	direct commission 2015 (study 2013)
Realization	2016–2017
Client	private
Program	12 condominiums (4 attica, 8 atelier lofts)
Photo	Alexander Jaquemot

Where formerly the location of transportation company halls stood, will now be inhabited / 8 angled live-in studios, rotated to one another and 4 superimposed, multi oriented loft apartments are amalgamated into one sculptural, horizontal volume / At the center of the extra deep ground floor apartments, a double height room is located that brings light into the depth of the floor plan and leads to unexpected generosity / Similarly to an American „porch“, an overhigh veranda stretches across the whole length of the building.

## Replacement Lüssihof Keiser, Zug

Commission	direct commission 2015
Realization	2016–2017
Client	private
Program	carpenters' workshop, office, private heating plant, garage
Photo	Georg Aerni

*In the historically important farmstead ensemble a heating station, shed and military barracks from the 1960s were replaced / A carpentry of a restaurateur and a new heating station with offices and an open carpark were created / Their position and distinctive roof shape, with a striking concrete chimney and wood as a contemporary building material were carefully detailed / Two large display windows in the gable end of the studio give a specific imprint to the ensemble.*

## School Reitmen, Schlieren

Commission	competition 2012, 1 <sup>st</sup> prize
Realization	2014–2017
Client	City of Schlieren
Program	23 classrooms, learning centre, day nursery, kinder- garten, auditorium, triple gym, sports ground
Photo	Georg Aerni

*The project acknowledges the history of the location, a former industrial area, dominated by large factories with shed roofs, through its architectural formulation which gives the school its specific identity / In the big, three storey building day care and kindergarten are directly accessible from the outside, while the primary school on the first floor and the middle school on the second floor are each accessed by an individual staircase / On each floor two large streets act as internal access for the different departments / A sports building with a triple gym and auditorium, built in exposed concrete as a contrast to the metal clad school building, marks the end of the complex towards the railway tracks.*

## Restoration Mühlebau- anstalt, Zurich

Commission	direct commission 2013
Realization	2015–2016
Client	private
Program	commerce, offices
Photo	Graber Pulver Architekten

*Conversion of an early industry building to an architectural office in the former industrial area of Zurich / Various changes during the last decades have compromised the building to a unrecognizable condition. The classical order of the brick facade is restored and the big openings are incorporated into the structure of the facade / The typological order as well as the choice of materials on the inside should help to retrieve the industrial character of this late 19th century contemporary witness.*

## Residential Development Schönberg Ost, Plot D, Bern

Commission	workshop u. invitation 2008
Realization	2014–2016
Client	Pensimo Management AG
Program	2 city villas, parking garage
Photo	Hannes Henz

*The new neighborhood Schönberg Ost is urbanistically developed by referencing the neighbouring district with its old turn at the century city villas / Each multi-family house contains three full floors and an attic / Single story, corner-placed verandas act as the private outside space of those apartments in the typical floors, while the attic apartments offer generous roof terraces / All the larger apartments have a central hall that can be used as lounge area.*

## Europaallee, Plot G, Zürich

<i>cooperation with Masswerk Architekten AG</i>	
Commission	competition 2009, 1 <sup>st</sup> prize
Realization	2012–2015
Client	SBB AG, Zurich
Program	46 apartments, senior resi- dence, shops, offices, gastro, underground parking
Photo	Georg Aerni

*The project creates, along with the two plots next to it, the core of the Europaallee in close proximity to the main train station of Zurich / The sophisticatedly formulated building volume is based on a three to five story plinth for commercial and office use, on top of which two residential towers, with different heights and orientation, arise that unfold a spatial presence on their surroundings / The building envelope made of bronze colored aluminum appears vivid and plastic and is distinguished by an innovative shading system with telescopically extendable elements made of perforated aluminum that appear out of the lintel.*

## Museum of Ethnography MEG, Geneva

Commission	open comp. 2008, 1 <sup>st</sup> prize
Realization	2010–2014
Client	City of Geneva
Program	exhibition halls, library, media center, auditorium, foyer/caféteria; renovation existing building
Photo	Leo Fabrizio

From urban considerations, the large scale exhibition spaces that had to be designed as black boxes, were placed underground / The above-ground part of the museum has an iconographic presence in the urban context / Like a carpet, the metal roof is atop of the above-ground volume with its exposed concrete sidewalls and evokes pictures of the past as well as a vision of the future thanks to its rhomboid window openings / The generous staircase connects the media center under the roof with the column-free underground exhibition space / The entrance hall and cafeteria on the ground floor face a square that is slightly raised from the street level.

## Housing Development Grünmatt FGZ, Zurich

Commission	study comp. 2007, 1 <sup>st</sup> prize
Realization	2010–2014
Client	FGZ Familienheim-Genossenschaft, Zurich
Program	155 apartments, guest rooms, ateliers, kindergarten, day-care, underground parking
Photo	Philip Heckhausen

Four differently angled, long building rows running parallel to the terrain's slope create nearly horizontal outdoor spaces that act as circulation and meeting places / All the townhouses in rows 2 and 4 as well as all ground floor apartments in rows 1 and 3 have access to a private garden / Carefully placed gaps in the rows connect the residential areas with one another / All apartments offer a generous patio facing the South and have living spaces that extend through the width of the building, offering views of the city to the North.

## Waste Incineration Facility and Powerstation Forsthaus, Bern

Commission	competition 2005, 1 <sup>st</sup> prize
Realization	2008–2013
Client	ewb Energie Wasser Bern
Program	refuse incineration facility, wood/gas-steam combined station, offices, visitor center
Photo	Hannes Henz

Resembling a container ship anchored at harbor, the building is placed on the outskirts of Bern / To accommodate future changes in the process technology, the construction of the building needs to be durable and at the same time flexible / The base and waste bunker are made out of in-situ concrete, the halls of the process technology are constructed as a tectonic shell out of pre-cast concrete elements / By allowing precise views into the process technology and thanks to generous openings to the surrounding forest, the promenade establishes a relationship between "machine" and nature.

## Residential Development Schönberg Ost, Plots A/C, Bern

Collaboration	Masterplan: H. Kollhoff, Rotkreuz/Berlin, and Büro B, Bern, 2002/03
Commission	workshop upon. invit. 2008
Realization	2009–2011
Client	private (3x) / Steiner AG (1x)
Program	4 city villas (30 condomin.)
Photo	Hannes Henz

Graber Pulver reinterprets the specific characteristics of Bernese roof design and translates them into a new language / A delicately divided framework in precast concrete frames the openings, structures the facade and gives them a strong plasticity / Open corner loggias give a strong identity to the building - due to their changing play of light and shadow.

## Vocational School GIBB Viktoria, Bern

Commission	open comp. 2004, 1 <sup>st</sup> prize
Realization	2009–2011
Client	Canton of Bern
Program	class rooms, laboratories, caféteria, offices; renovation and conversion exist. building
Photo	Walter Mair

A new angular building takes the floor height and typology of the existing school building by Otto Lutsch (1906) and complements it to a new overall shape / The new building divides the existing outside space into three different courtyards with different uses: the central atrium, the connecting schoolyard and a public garden / Inside, an operationally beneficial circulation system is established / Pre-fabricated, pigmented concrete elements form the relief of the new façade and act as an intermediary to the plastically formed existing sandstone façade.

## Vocational Training Centre EMF, Fribourg

Commission	open comp. 2003, 1 <sup>st</sup> prize
Realization	2007–2011
Client	Canton of Fribourg
Program	classrooms, ateliers, work shops, auditorium, cafeteria, offices, gym, parking
Photo	Georg Aerni

*New apprentice workshops for technical and industrial professions / The long stretched, horizontal volume is embedded into the large scale context of the former industrial area and is in close dialogue with the verticality of the high rise building at the junction / A continuous form over the length of the building expresses the distribution of uses with workshops on top / The expressive section and the linear internal organization lend the peculiarity of a metal profile or a workpiece to the volume / The serial order, the construction and the materialization give the project an industrial imprint.*

## Housing Development Chriesimatt, Baar

*Collaboration with Ghisleni Partner AG, Rapperswil*

Commission	study compet. 2003, 1 <sup>st</sup> prize
Realization	2007–2009 + 2012–2014
Client	private
Program	171 (99+72) apartments, parking, park
Photo	Walter Mair

*Two long segmented rows of multi-angled and height-staggered apartment houses create an interior space that opens to the landscape in the south / Different sorts of trees and shrubs with varying colors and flowers give life to a „magic forest“, in which private gardens are partially embedded / A wide-range of apartment types is integrated into a single architectural language / The pearl and coral colored loggias and windows contrast with the darker sepia hue of the plastered building volumes.*

## Glarisegg Boarding School, Steckborn

Commission	competition 2004, 1 <sup>st</sup> prize
Realization	2006–2007
Client	Foundation Glarisegg
Program	3 apartments (for 10 adolescents each incl. caregiver), janitor apartment
Photo	Walter Mair

*The one to two storey building is subjugated to the medieval main building and, with its angular shape, forms an exterior space with access from the lake side and a garden to the south / Rooms arranged in groups create three housing units and divide the open, commonly used living, eating and playing area / A manifold of diagonal spatial relationships offer each unit views to other housing groups, the lake and the garden / The plastically shaped wooden façade is reminiscent of rural barns or simple accommodations such as youth hostels.*

## Rondo Apartment House, Zurich

Commission	direct commission 2004
Realization	2005–2007
Client	Rondo-Bau GmbH, Kloten
Program	multi-family house with 22 condominiums
Photo	Walter Mair

*The irregular pentagonal geometry of the building is derived from the shape of the plot, allowing its ideal use / The attractive staircase inside the vertically lit atrium lends a strong interior identity to the building / All the apartments are located in the corners and offer closed bedrooms and open living rooms / In contrast to the plastically formed, crystalline interior, the outside appearance is shaped by translucent, smoothly curved fabric made out of chrome nickel steel.*

## Leopard Pit Dählhölzli Zoo, Bern

Commission	competition 2005, 1 <sup>st</sup> prize
Realization	2006
Client	City of Bern
Program	outdoor enclosure for Persian leopards (600 m <sup>2</sup> ), stables, feeding boxes
Photo	Walter Mair

*The structure of the cage is part of a new landscape / A hem-like band of concrete surrounding the cage acts as the backdrop for the artificial landscape, becomes the roof of the glazed window in the foreground and also anchors the textile-like net of chrome steel in the ground / The netting is supported by five oak trees and, in return, stabilizes them / In varying light, the net appears to be a fog over the landscape, a cobweb over trees, or – thanks to its curved contours – resembles the hilltops of Persia.*

## School Haltenstrasse, Niederscherli

Commission	competition 1993, 1 <sup>st</sup> prize
Realization	2004–2005
Client	municipality of Köniz
Program	classrooms, multipurpose room, kindergarten
Photo	Hannes Henz

The school building is embedded across the sloping hillside, creating a 3 storey façade downslope and a 2 storey façade upslope, thereby differentiating the surroundings: The lower square space is facing the village, the upper area has the more intimate character of a garden / A column arcade spanning both stories appears intricate, and provides hints of a garden space / The classrooms on the ground floor extend through the whole width of the building, allowing light to enter from the west as well as the east / The upper floor classrooms are accessed by a corridor designed as a three-sided glass volume / The columns were pre-fabricated from smooth white cement while the wall surfaces were executed in sandblasted exposed concrete.

## Residential Development Chilehügel, Etappe 1, Birmensdorf

<i>Cooperation with Martina Hauser, Zurich</i>	
Commission	study compet. 1999, 1 <sup>st</sup> prize
Realization	2003–2004 (incl. development of a design plan)
Client	private
Program	2 semi detached houses
Photo	Stephan Baumann

The masterplan provides for 50–60 apartments that follow the natural contour of the hill in a parallel orientation / Through a slight staggering of the houses further up the hill the permeability of the built structure is underlined and the character of the „Chilehill“ as a greenbelt is preserved / In the first phase two semi detached houses, each with two duplex apartments back to back, are constructed / The local typology of the freestanding house with gabled roof has been adopted / The façades are clad in high-quality, evenly weather native chestnut wood.

## Holiday Residence, Montana

Commission	direct commission 2002
Realization	2002–2003
Client	private
Program	vacation home
Photo	Hannes Henz

The form of the building's envelop develops out of the volume, tying together openings like the sliding shutters in an overall organizing principle that lends the house a peaceful composure / In the middle floor, a veranda which cuts over the whole length of the building extends the interior towards the valley / On the top floor, a gallery spanning the depth of the building offers views of the impressive landscape / The prefabricated raw larch lining elements of the supporting structure references the regional woodworking traditions.

## Residential and Commercial Building Eilgutareal, Biel

Commission	competition 2000, 1 <sup>st</sup> prize
Realization	2001–2002
Client	Parking Biel AG/City of Biel
Program	shops, offices, apartments, access to the parking garage
Photo	Hannes Henz

The new building finishes the edge of the city block on Biel's station square and distinctively terminates it to the edge of the plot and railway tracks / The characteristics of the existing railway buildings – proportions, orders, materiality – are picked up and newly interpreted / The main entrance with an adjacent retail store and a underground parking lobby spanning the width of the building are located on the ground floor / A hard, smooth lime plaster with added marble powder give the building its appropriate refinement and is reminiscent of polished natural stone slabs that are often used in the neighborhood as a base area cladding.

## School Bachtobel, Zurich

Commission	competition 1999, 1 <sup>st</sup> prize
Realization	2001–2002
Client	City of Zurich
Program	classrooms, gym, kindergarten, day nursery; renovation existing building
Photo	Heinrich Helfenstein

Through an angling and together with a staggering of the height, the building volume is modulated and lies as smoothly in the landscape as the existing buildings / The big windows openings of the two-sided classrooms partially allow the view through the building to the opposing Zürichberg / This spatial disposition is possible thanks to a special access system based on a generously dimensioned corridor in the middle floor – a kind of spine. From there all areas on the floor above and below can be accessed individually by ascending and descending stairs.

## Forum Expoagricole, Expo 02, Murten

Commission	direct commission 1999
Realization	2000–2002 (disassembled)
Client	Association Expoagricole
Program	exhibition and event hall
Photo	Hannes Henz

The Forum was built to provide a gathering and event space as well as an arena for agricultural associations with a grandstand, a

podium and small catering infrastructure / Formally, the construction resembles wide-meshed, rural basketworks or traditional fences made of elaborately woven branches / The filigree structure presents itself with varying porosity in accordance to the direction of the laminated wood planks framework / Six trusses span the building, the walls and ceiling brace each other, whereby the overall stability is only reached with the final connection.

## Vocational Training Centre LWB Felsenau, Bern

Commission	competition 1995, 1 <sup>st</sup> prize
Realization	1999–2000
Client	City of Bern
Program	workshops, laboratories, caf�eteria, offices, depots
Photo	Hannes Henz

By placing the new apprentice workshop building in front of the re-vitalised halls of the old spinning mill, a prominent endpoint is marked and a generous outside space and entrance were created / Cutouts in the volume give the building its plasticity and accentuate the location of skylights or structural glazing / Key to the spatial understanding of the project is the generous lobby on the entry floor that offers a view over the roof landscape of the existing facility as well as the surrounding landscape.
