GRABER PULVER

*January 2024*

Our discipline is architecture in its entirety; our work is the reflection of a competition culture that we have been supporting for years as participants, organizers and jurors. We are generalists and, as trusted partners of our clients, committed to develop sustainable values and create visionary contributions to the building culture.

Naturally, we offer all architectural services, from the supervision of masterplans to a building completion. Experience in all delivery models, as well as new topics, such as Building Information Modeling (BIM), form our competency for the complex planning and realization process.

The structure of our office and our culture of interdisciplinary work with third parties corresponds with our curiosity and, simultaneously, reflects the complexity of an ever-changing building industry.

Teaching positions allow us to question our positions, to expand our knowledge and to incorporate insights from research into our work. In doing so, 70–80 qualified employees in Zurich and Bern support us – talents and personalities from Switzerland and abroad.

Marco Graber and Thomas Pulver founded their own architecture office in 1992 after studying at ETH Zurich and collaborating with Cruz y Ortiz arquitectos, Sevilla (Marco Graber) and Torres-Martinez-Lapeña arquitectos, Barcelona (Thomas Pulver). In 1999 they were awarded with the New York Studio Scholarship of the Canton of Bern. Besides various teaching positions, among others at ETH Zurich and EPF in Lausanne, they are regular jury members of architectural competitions, commission members (BSA, SIA and more) as well as invited as experts or lecturers at various architectural universities in Switzerland and abroad.

## Marco Graber

Dipl. Arch. ETH BSA SIA REGA / partner

2022–2023	Visiting Professor for Architecture Politecnico Milano
since 2019	Expert for Masterthesis Projects at ZHAW Winterthur
2016–2017	Visiting Professor at ETH Lausanne (EPFL)
2016	Member Jury Liang Sicheng Architecture Prize, Beijing
since 2010	Member of Foundation Board Research Planning Competitions, Zurich
2008–2013	Member of the City Building Commission of Lucerne
2006–2008	Visiting Professor at the Department of Architecture ETH Zurich
2004–2006	President of Local Group Bern in the BSA
2004	Founder and Partner of Graber Pulver Architekten AG
since 2001	Jury Member of various Competitions
2001–2016	Member of the Competition Commission SIA
2000–2001	Atelier Scholarship Canton Bern, Study Visit in New York
1994–1999	Diploma Assistant at Prof. A. Meyer and R. Tropeano at ETH Zurich
since 1992	Activity as expert, guest critic and speaker at various universities
1992	Foundation of own architecture office with Th. Pulver in Bern/Zurich
1991–1993	Assistant at Prof. Dolf Schnebli and Ruggero Tropeano, ETH Zurich
1990–1991	Collaborator at Cruz & Ortíz arquitectos in Sevilla
1989	Open Diploma at Prof. F. Oswald, A. Ortiz, J. Blumer, Prof. A. Corboz
1983–1989	Studies of Architecture at ETH Zurich
1962	born in Berne

## Thomas Pulver

Dipl. Arch. ETH BSA SIA REGA / partner

2022–2023	Visiting Professor for Architecture Politecnico Milano
since 2021	Member of the City Building Commission of Zug
2020–2022	Member of the Commission for Innovation (KfI) of the CRB
2016–2017	Visiting Professor at ETH Lausanne (EPFL)
2015–2022	Member of Advisory Council at BFH Burgdorf, Dep. Architecture
2013–2015	Consultant Mandate Town Planning Olten
2011–2020	Member of Foundation Board ESS/SPA, Swiss Plastic Exhibition, Biel
since 2008	Member of Editorial Board Commission <i>as, architecture suisse</i> , Lausanne
2006–2008	Visiting Professor at the Department of Architecture ETH Zurich
2004	Founder and Partner of Graber Pulver Architekten AG
2001–2013	Delegate of the BSA at D-ARCH, Dep. of Architecture ETH Zurich
2001–2008	Member Editorial Board Commission 'werk, bauen & wohnen'
2000–2001	Atelier Scholarship Canton Bern, Study Visit in New York
since 1992	Activity as expert, guest critic and speaker at various universities
1992	Foundation of own architecture office with M. Graber in Bern/Zurich
1991–2000	Associate Professor for Urban Analyzes (ZHAW Winterthur)
1991–1992	Assistant at Prof. Ernst Studer (ETH Zurich)
1991	Collaborator at Kündig Hubacher Bickel Architekten, Zurich
1990	Collaborator at Torres & Martínez Lapeña arquitectos, Barcelona
1989	Open Diploma at Prof. F. Oswald, A. Ortiz, J. Blumer, Prof. A. Corboz
1987	Internship at Hodgetts & Fung, Los Angeles
1982–1989	Studies of Architecture at ETH Zurich
1962	born in Berne

Photos: Walter Mair

Graber Pulver Architects were founded in 1992 and are since 2004 a joint-stock company, owned by Marco Graber, Thomas Pulver, Thomas Winz and Alexander Huhle.

## Thomas Winz

Dipl. Arch. HTL BSA / partner

2015–2020	questor of BSA Switzerland
since 2009	Member of management board Graber Pulver Architekten and office manager Berne
2007–2008	CAS Project Management, university for tech. and arch., Lucerne
2006	form SIA; Project Management for Engineers and Architects
since 2004	Partner Graber Pulver Architekten AG
1998–2003	Collaborator at Graber Pulver Architekten, Berne
1992–1997	Collaborator at architecture office Valentin und Partner, Berne
1991	Internship Studio BAUTON architects, Los Angeles
1988–1990	Collaborator at architecture office Otto Althaus, Berne
1985–1988	Studies of Architecture at Technikum Burgdorf
1980–1984	Drafting Apprenticeship at architecture office Lutstorf and Hans, Berne
1964	born in Berne

## Alexander Huhle

Dipl. Ing. Arch. TH SIA / partner

since 2013	Partner Graber Pulver Architekten AG
since 2009	Member of management board Graber Pulver Architekten AG and office manager Zurich
since 2004	Collaborator at Graber Pulver Architekten AG
2003–2004	Collaborator at Baurmann Architekten, Karlsruhe
2003	Open Diploma at University of Karlsruhe, Prof. A. Lederer/Prof. A. Janson
1996–2003	Studies of Architecture at University of Karlsruhe and Accademia di architettura, Mendrisio
1996–2002	Scholarship of the German National Academic Foundation
1996–2001	Collaborator at Ruser+Partner, Karlsruhe
1995–1996	Collaborator at Georg Albrecht, Carpentry and Restoration, Rottweil (D)
1974	born in Tübingen (D)

## Hans-Peter Baumli

Dipl. Arch. ETH SIA

since 2019	Member of the management board at Graber Pulver Architekten AG
2012	Certificate CAS: Purchaser competence – Project Management and Overall Direction in Building Process
since 2008	Collaborator at Graber Pulver Architekten AG
2004–2008	Collaborator at Adrian Streich Architekten AG, Zurich
2004	Collaborator at Architekturbüro Beda Dillier, Sarnen
2002–2003	Collaborator at GLS Architekten AG, Biel
2002	Diploma at Prof. Adrian Meyer, ETH Zurich
1998–1999	Collaborator at Architekturbüro Andrea Bassi, Genf
1996–2002	Studies of architecture at the ETH Zurich
1976	born in Sarnen, Obwalden

The four partners together with Hans-Peter Baumli form the management board.

Each location has its own office management (Berne: Thomas Winz, Zurich: Alexander Huhle).

### Berne

address	Gasstrasse 4, 3005 Berne
building	1953–1954 as laundry
Bauherr	Christoph Papritz
client	Hans Brechbühler
restoration	1997

In 1953, the laundry Papritz commissioned Hans Brechbühler, a pupil of Le Corbusier, with an extension. On top of the previous building Brechbühler created a two story concrete skeleton structure. The Brechbühl building is among the best and highest quality industrial buildings of the early 1950s in Berne.

### Zurich

address	Sihlquai 75, 8005 Zurich
building	built 1880, conversion to „Mühlebauanstalt“ 1924
client	Walter and Otto Gericke
restoration	2015–2016

In 1894, Walter H. Gericke founded a modern, semi-automatic milling plant. His sons Walter and Otto obtained a factory building at Sihlquai 75 in 1924 and added a three-story office building in 1924. There, the office of Graber Pulver was formerly located, before it moved to the original main brick building after its conversion in 2016.

photos: Istvan Balogh /  
photo Mischa Trnka: private

Three associates support the management of the office. Each associate is involved in several projects and responsible for design (Andrea Bieri), quality assurance and apprenticeships (Sascha Höpfner) and competitions (Mischa Trnka).

## Andrea Bieri

Dipl. Arch. ETH / area of responsibility Design

since 2019	Associate at Graber Pulver Architekten AG
since 2008	Collaboration at Graber Pulver Architekten AG
2008	Collaboration at GFA Gruppe für Architektur GmbH, Zurich
2007	Diploma at Prof. Adrian Meyer, ETH Zurich
2005–2006	Internship at Graber Pulver Architekten AG
2003–2004	Internship at Agence d'Architecture Anthony Béchu & Associés, Paris
2001–2007	Studies of architecture at the ETH Zurich
1981	born in Basel

## Sascha Höpfner

Dipl. Arch. HTL / area of responsibility QA planning and apprenticeship system

since 2019	Associate at Graber Pulver Architekten AG
since 2013	Collaborator at Graber Pulver Architekten AG
2008–2013	Collaborator at Voemel Architekten, Zurich
2007–2009	Apprenticeship in lightning design SLG, Winterthur
2004–2008	Collaborator at Marco Rossi Architektur, Zug
2001–2003	Collaborator at ECAS AG, Ebmatingen/London
1999–2001	Collaborator at Stephan Jaklitsch Design, New York
1995–1999	Studies of architecture at the HTL Burgdorf
1994–1995	Collaborator at the architectural office Peter Burki, Solothurn
1989–1993	Draftsman apprenticeship in Solothurn
1973	born in Solothurn

## Mischa Trnka

MSc Arch. ETH SIA / team leader competitions

since 2021	Associate at Graber Pulver Architekten AG
since 2017	Collaborator at Graber Pulver Architekten AG
2013–2017	Collaborator at Michael Meier und Marius Hug Architekten, Zurich
2011–2012	Internship at Michael Meier und Marius Hug Architekten, Zurich
2007–2008	Internship at Schneider & Schneider Architekten, Aarau
2006–2013	Studies of architecture at the ETH Zurich
1986	born in Aarau

Architecture is a supporting member of the building culture, it cannot cure social problems but it should raise questions, create identity, allow for identification. In equal measure we feel responsible for landscape and the European city, with its fragmented spaces.

At the core of our architectural interest lie theoretical and practical questions of form finding and contextualisation.

The result of a design process is the „gesture“, that expresses what an architectural design contains in its entirety through a specific „form“ or „stance“. Ambivalences and interplay between abstract programs and their physical or cultural context drive us along our path of exploratory design. In the process we solve the spatial potential and search for social relevance.

Ideally, our design satisfies multiple requirements simultaneously and, through a profound body of knowledge, creates unforeseen elegant sustainable solutions, with a high urban, spatial and functional quality.

in June 2019

Recycling centre Juch-Areal, Zurich

Commission	competition 2023, 1 <sup>st</sup> prize
Realization	n.a.
Client	City of Zurich
Program	recycling centre
Visualization	internal

The design of the new recycling yard is largely determined by visibly reused building components / A vertical plant filter and wall elements made of materials recycled on site give the facility a new architectural identity / The sensible arrangement and natural lighting of the various areas of use, as well as efficient pathways for users and operators, should enable smooth operation with the lowest possible energy requirements.

New construction of fire and rescue station 1, Cologne

Commission	competition (limited anonymous RPW2013) 2022, 1 <sup>st</sup> prize
Realization	2025–2030
Client	City of Cologne, Office for Fire Protection, Rescue Service and Civil Protection
Program	fire station and rescue service, emergency control centre, crisis team
Visualization	maaars Visualisierungen

The existing functional building from the post-war period is to be replaced by a contemporary building that meets today's requirements

rements / In a prominent location, the building presents itself confidently and naturally as an important part of Cologne's security infrastructure, while blending into the residential neighbourhood with staggered terraces and green facades at the back / The highest operational and technical demands are combined inside with a homely environment in the social areas of the emergency forces on the inside / The structural solution enables a compact stacking of the different room dimensions and uses while protecting the archaeological monuments.

Waste Incineration Facility Thurgau, Weinfelden

Commission	study comp. 2022, 1 <sup>st</sup> prize
Realization	2026–2033
Client	Verband KVA Thurgau
Program	Waste Incineration Facility with optional expansion to a energy-hub

Visualization maaars Visualisierungen

The project is seeking the dialogue with the landscape and develops a physical autonomy with a strong architectural identity / The various building stones of the operational program form a conglomerate of different volumes that are tied together architecturally through their analogous vertical structure and materialization / The immense scale of the facility is thereby naturally integrated into the landscape.

ZHAW Campus Technikumstrasse, Stage I, Winterthur

Commission	competition 2018, 1 <sup>st</sup> prize
Realization	2024–2029
Client	Canton Zurich
Program	campus park, bank renovation, 2 university buildings with laboratories, workshops, classrooms,

offices, mensa, car and bike garage, logistics hub

Visualization indievisual AG

A highly flexible modular room layout and thus a variety of different operational scenarios should be enabled on the basis of a building grid / Technical innovation, which characterizes the future work in the laboratories and workshops, is reflected in the architectural translation / The access hall of the workshop building lets zenithal natural light far down into the body of the building and creates a center for communal exchange / The refectory building is connected to the park through a cantilever and established as a new center for the site..

Residential Development Künigmatt, Zurich

Commission	competition 2021, 1 <sup>st</sup> prize
Realization	2025–2028
Client	CS Real Estate Fund Living Plus
Program	149 apartments, among them 20 apartments for elderly people, communal spaces, underground parking

Visualization Nightnurse Images AG

The six existing apartment buildings are being replaced by two large scale 5-storey rows with attic, that are spanned perpendicular between the two streets Küngematt and Im Heuried, thereby keeping the existing position cross to the streetscape / Through a geometric recess of each unit and a volumetric staggering, the long volumes are structured and get a specific rhythm / The new buildings exhibit a character of a noble apartment building, facing a calm, parklike surrounding.

Replacement building Schwamendinger-Dreieck, plot B, Zurich

Commission	competition 2019, 1 <sup>st</sup> prize
Realization	2027–n.s. / 2029–n.s.
Client	BGZ Baugenossenschaft Glattal Zurich
Program	neighbourhood square cooperative housing (198 apt.), care facilities, retail, office, parking
Visualization	maaars Visualisierungen

In course of a densification of the garden city, the "Triangle Schwamendingen" has the role of an exceptionally important urban hinge / At the tip of the triangle, a new part of city with a new identity and a high living-quality is being created / Two eight-story, offset buildings mark a strong double-figure that define the new "city square" / Towards the east, the buildings recede to five stories; two new living squares emerge laterally to the new middle-axis / The new through-living apartments with generous exterior spaces face mainly towards the south / The two care-centers are situated in an attractive spot in the middle of the development.

Regional Care Center Baden RPB, Baden

Commission	study comp. 2018, 1 <sup>st</sup> prize
Realization	2023–2027
Client	RPB, Baden
Program	urban/architectural reorganization with park, care department (300 beds), 82 senior apartments

Visualization maaars Visualisierungen

As a framework for urban reorganization the design foresees an unshakeable ensemble of 4 orthogonally joined, precisely interlocked wings, that create differently used exterior spaces / The listed central Palace building from 1912 should get back its original character / In a quiet location, in a part, there are 3 six storey old-age-compatible buildings / A „rue intérieur“ connects the new wings and creates an enfilade of diverse common areas / With the inclusion of the old trees and traces of the historic garden, the park is translated into a new form and is gradually zoned in various levels of publicity.

Residential Development Enggistestrasse, Worb

Commission	direct commission with study 2018
Realization	2024–2027
Client	private
Program	11 condominiums
Visualization	indievisual

On a sunny hillside with views over the Bernese Alps, located in a quiet residential neighbourhood of Worb, a sophisticated new apartment house in wood-hybrid construction is being built / Eleven very specific duplex, one-storey and penthouse condominiums with 2.5 – 4.5 rooms and individualized layouts are offered / All units offer a ground level access form the carport in the middle of the three storeys as well as a generous porch as extension of the living space towards the garden / The interior walls of the condominiums are mostly non load-bearing and offer a flexible configuration of the floor plans.

Residential Development Lüsi, Zug

Commission	direct commission 2022
Realization	2024–2026
Client	Lüsi Immobilien AG, Zug

Program 124 apartments  
Visualization internal

The ten buildings with 124 rental flats arranged in three different building types will be realized in timber construction / On the west side, more closely linked to the existing settlement structure, are the house types E and F with their access balconies in front of the long side. The point-shaped G houses stand more freely, fan out towards the agricultural zone and form the new settlement edge in the east / All buildings are connected to an attractive common access axis to strengthen neighbourly exchange.

Conversion Farm

Commission	Cooperation with Martina Hauser, architect, Zürich direct commission 2022
Realization	n.s.
Client	private
Program	housing

The old multi-purpose farmhouse, part of a historic architectural ensemble, will be converted, according to its original use, into a multi-generational house in line with modern-day requirements / A modernisation of the structural substance under the guidelines of historical preservation, cautious interventions and minimal adjustments to the interior carefully bring the building into the new era / A small dormer window and individual glass tiles, spread along on the even roof surface, structure the plane tile roofing and bring daylight into the depth of the large roof volume.

## Residential and Commercial Building Buerkli-Areal, Zurich

Commission	study compet. 2012, 1 <sup>st</sup> prize
Realization	n.s.
Client	Swisscanto Anlagestiftung (Zürcher Kantonalbank)
Program	109 apartments, commerce, offices
Visualization	Raumgleiter GmbH

*Demands for representation, upmarket standards and urban living in a park are contrasted by noise pollution and the hard frontality of a long row house / The result is a specific typology of a serially arrayed, twisted apartments / The twist in the floor plan leads to larger side surfaces and all-aspect oriented apartment / What is perceived from the street, in front of the building that orientates itself towards the slope of the park.*

## Replacement Residential Development Hardau I, Zurich

Commission	open competition 2018, 1 <sup>st</sup> prize
Realization	2022–2025
Client	City of Zurich
Program	122 cooperative apartments, kindergarten, commerce, ateliers, offices
Visualization	Nightnurse Images AG

*The project incorporates the dense program into a pronounced composition of two volumes with different heights and forms / A building slab along the Hardstrasse extends the building block and searches for a contextualization of scale with a change from 4 to 7 floors / The second building volume – accessible via a „rue intérieure“ – possesses a six storey, comb-like shape and extends into the depth of the site.*

## Esplanade Nord, Part West, Biel

Commission	competition 2013, 1 <sup>st</sup> prize
Realization	2019–2025
Client	Allco AG
Program	108 apartments, 40 senior apartments, hotel (104 rooms), offices, retail,
Visualization	maaars Visualisierungen

*Towards the new Esplanade, a big urban square by Swiss standards, the project creates a seven storey, horizontally layered, long urban front, that develops its own specific identity through an undulating balcony-loggia layer / An arcade at the high ground floor as well as a two storey formulation of the attic lend an interesting disposition to this urban front / Differently aligned and designed courtyards define the project's interior and facilitate a differentiated use of the ground floor / Depending on the situation inside the blocks, different apartment types are created in order to make this new piece of city accessible to a wide range of users.*

## Extension Studio House Muehlebaanstaal, Zurich

Commission	direct commission after study 2022
Realization	2023–2024
Client	private

Program	offices
Rendering	interne

*The historic commercial building is being extended by one storey / The slightly raised studio floor offers generous space for work areas, meeting rooms and auxiliary rooms / The structural brick pilaster strips of the lower storeys are continued upwards, the windows are widened / A pergola protects the newly created lounge area on the rooftop / Adjacent photovoltaic panels provide a sustainable source of energy.*

## Residential Development Südhang, Herrenschwanden

Commission	direct commission after study 2018
Realization	2020–2023
Client	GBG Generalplaner Bau GmbH, Bern
Program	4 twin houses, underground parking

*At an exceptional viewpoint high above the Bremgarten-Aare-gorge the project "Südhang" foresees four elegant double-family houses with eight apartments – tailored living-typologies with added spatial value / Individual entrances lead to generous "living-landscapes" / The apartments stretch over multiple stories, creating spatial configurations with diverse views and qualities similar to single-family houses / Terraces between the buildings create public and private exterior spaces and at the same time form an acoustic barrier against the traffic noise.*

## Heat Supply Zurich-West, Heating Plant Josefstrasse, Zurich

Commission	Planer evaluation procedure 2014 with engineers
Realization	2019–2023
Client	ERZ Zurich
Program	conversion/reuse as part of extension Heat Supply Zurich-West
Photo	Georg Aerni

*The waste incineration power plant on Josefstrasse supplies the neighbourhood Zurich-West with district heating and has been shut down in 2020 / To maintain the heat supply and to add further areas with district heating, it is planned to connect this heating system with Zurich-North.*

## Area Keller Ziegeleien, Plots IIa/IIIa/IIIb Winterthur-Dattnau

Commission	direct commission after study masterplan 2016
Masterplan	working group with Fischer Architekten AG / Krebs und Herde GmbH
Realization	2019–2021, 2021–2023
Client	Keller Prefadom AG
Program	31 senior apartments, café (plot IIa), 51 condominiums (plot IIIa), 34 condom. (plot IIIb), underground parking
Photo	Seraina Wirz

*At the transition of the settlement to the landscape, a new part of the city with about 260 apartments is planned / The masterplan, developed together with Krebs und Herde and Fischer Architekten, should be implemented in stages / South of the central „Ziegelei square“ is a five storey plastered building with senior apartments and a café (plot II) / Softly rounded balconies from precast concrete give the lightly plastered volume an air of elegance; the choice of materials and a precisely defined roof edge lead to a character of sophisticated craftsmanship.*

## Residential Development Feldbreite, Plot C1, Emmen

Commission	Planer evaluation procedure 2018, 1 <sup>st</sup> prize
Realization	2020–2022
Client	Develop Invest AG
Program	73 condominiums, underground parking

*Based on the guidelines of the master plan, an urban approach was developed, with four storey blocks, that are permeated by generous passageways that lead to an internal courtyard, which is brought to life by various activities / In a greater whole, a diversity of different forms of access, apartment types, and exterior spaces create the potential of identification.*

## Residential Development Sennhüttenstrasse, Birmensdorf

Commission	direct commission 2015
Realization	2018–2020
Client	Senn Ressourcen AG
Program	20 condominiums, 18 townhouses, underground parking
Photo	Georg Aerni

*Based on our master plan from 2001 and in addition to the already existing semi deta-*

*ched houses in the upper part of the slope (i.a. from Graber Pulver), is a development of the four lower rows, that follow the terrain in a stepped manner / For the idyllic location directly on the foot of the church slope condominiums tailored for all phases of life were developed / Overlooking the street are apartments and further up the slope are variously sized town houses with garden / The units are architecturally energized with double height spaces, split-level sections and changing staircases.*

## Geistlich-Areal Plot C1, Schlieren

Commission	study comp. 2015, 1 <sup>st</sup> prize
Realization	2017–2020
Client	Geistlich Immobilien AG
Program	215 apartments (thereunder 78 senior apt.), care center (30 rooms), commerce, offices, underground parking
Photo	Philip Heckhausen

*The program for this openly designed city block in the former industrial area of Schlieren incorporates facilities for the elderly, attractive studio apartments by the park, apartment clusters for experimental forms of living in the tower as well as offices, stores and a cafeteria with a connectible multipurpose room / What the park does on a larger scale, the "rue intérieure" offers to the inside of the block: it connects the very diverse user groups and creates an internal meeting place / The construction with using solid bricks hints at the material's traditional use for industrial buildings in the Limmat valley and correlates with the open building typology.*

## Esplanade Nord, Part East, Biel

Commission	competition 2013, 1 <sup>st</sup> prize
Realization	2016–2018
Client	private
Program	160 apartments, retail, offices
Photo	Alexander Jaquemot

„Esplanade“ is the name of the newly established city park on the former area of a gas plant that introduces an unusual grand scale to Biel and creates an urban foreground to Max Schlups Congress Center / Part East together with Part West create the northern extend of the park / Both are multi-piece city block figures that complete the neighborhood and close it toward the park / The 7 storey, rhythmic facade with an arcade along its entire length of 300 m create a sort of a „baroque shield“ that communicates between the dimension of the park and the northern part of the city.

## Retirement Home Gehren, Erlenbach

Commission	competition 2011, 1 <sup>st</sup> prize
Realization	2016–2018
Client	Municipality of Erlenbach
Program	18 senior apartments, 61 care rooms, common rooms, underground parking
Photo	Georg Aerni

On a very complexly shaped plot in a morphologically and spatially heterogeneous situation, the form of the project communicates to the outside as well as to the inside / The rooms and apartments are combined to make “houses” and are arranged in a village-like conglomerate / The project requires 20 senior apartments and 60 studios for stationary and ambulatory care, arranged in care and living groups / The façade is made out of bright, prefabricated and perforated fiber cement elements that lend the building its almost textile appearance with a summerlike airiness.

## Residential Development Uhlmann-Areal, Bern

Commission	direct commission 2015 (study 2013)
Realization	2016–2017
Client	private
Program	12 condominiums (4 attica, 8 atelier lofts)
Photo	Alexander Jaquemot

Where formerly the location of transportation company halls stood, will now be inhabited / 8 aligned live-in studios, rotated to one another and 4 superimposed, multi oriented loft apartments are amalgamated into one sculptural, horizontal volume / At the center of the extra deep ground floor apartments, a double height room is located that brings light into the depth of the floor plan and leads to unexpected generosity / Similarly to an American „porch“, an overhigh veranda stretches across the whole length of the building.

## Replacement Lüssihof, Zug

Commission	direct commission 2015
Realization	2016–2017
Client	private
Program	carpenters' workshop, office, private heating plant, garage
Photo	Georg Aerni

In the historically important farmstead ensemble a heating station, shed and military

barracks from the 1960s were replaced / A carpentry of a restaurateur and a new heating station with offices and an open carpark were created / Their position and distinctive roof shape, with a striking concrete chimney and wood as a contemporary building material were carefully detailed / Two large display windows in the gable end of the studio give a specific imprint to the ensemble.

## School Reitmen, Schlieren

Commission	competition 2012, 1 <sup>st</sup> prize
Realization	2014–2017
Client	City of Schlieren
Program	23 classrooms, learning centre, day nursery, kindergarten, auditorium, triple gym, sports ground
Photo	Georg Aerni

The project acknowledges the history of the location, a former industrial area, dominated by large factories with shed roofs, through its architectural formulation which gives the school its specific identity / In the big, three storey building day care and kindergarten are directly accessible from the outside, while the primary school on the first floor and the middle school on the second floor are each accessed by an individual staircase / On each floor two large streets act as internal access for the different departments / A sports building with a triple gym and auditorium, built in exposed concrete as a contrast to the metal clad school building, marks the end of the complex towards the railway tracks.

## Restoration Mühlebauanstalt, Zurich

Commission	direct commission 2013
Realization	2015–2016
Client	private
Program	commerce, offices
Photo	Grabner Pulver Architekten

Conversion of an early industry building to an architectural office in the former industrial area of Zurich / Various changes during the last decades have compromised the building to a unrecognizable condition. The classical order of the brick façade is restored and the big openings are incorporated into the structure of the façade / The typological order as well as the choice of materials on the inside should help to retrieve the industrial character of this late 19th century contemporary witness.

## Residential Development Schönberg Ost, Plot D, Bern

Commission	workshop u. invitation 2008
Realization	2014–2016
Client	Pensimo Management AG
Program	2 city villas, parking garage
Photo	Hannes Henz

The new neighborhood Schönberg Ost is urbanistically developed by referencing the neighbouring district with its old turn at the century city villas / Each multi-family house

contains three full floors and an attic / Single story, corner-placed verandas act as the private outside space of those apartments in the typical floors, while the attic apartments offer generous roof terraces / All the larger apartments have a central hall that can be used as lounge area.

## Europaallee, Plot G, Zurich

cooperation with	Masswerk Architekten AG
Commission	competition 2009, 1 <sup>st</sup> prize
Realization	2012–2015
Client	SBB AG, Zurich
Program	46 apartments, senior residence, shops, offices, gastro, underground parking
Photo	Georg Aerni

The project creates, along with the two plots next to it, the core of the Europaallee in close proximity to the main train station of Zurich / The sophisticatedly formulated building volume is based on a three to five story plinth for commercial and office use, on top of which two residential towers, with different heights and orientation, arise that unfold a spatial presence on their surroundings / The building envelope made of bronze colored aluminum appears vivid and plastic and is distinguished by an innovative shading system with telescopically extendable elements made of perforated aluminum that appear out of the lintel.

## Museum of Ethnography MEG, Geneva

Commission	open comp. 2008, 1 <sup>st</sup> prize
Realization	2010–2014
Client	City of Geneva
Program	exhibition halls, library, media center, auditorium, foyer/caféteria; renovation existing building
Photo	Leo Fabrizio

From urban considerations, the large scale exhibition spaces that had to be designed as black boxes, were placed underground / The above-ground part of the museum has an iconographic presence in the urban context / Like a carpet, the metal roof is atop of the above-ground volume with its exposed concrete sidewalls and evokes pictures of the past as well as a vision of the future thanks to its rhomboid window openings / The generous staircase connects the media center under the roof with the column-free underground exhibition space

## Housing Development Grünmatt FGZ, Zurich

Commission	study comp. 2007, 1 <sup>st</sup> prize
Realization	2010–2014
Client	FGZ Familienheim-Genossenschaft, Zurich
Program	155 apartments, guest rooms, ateliers, kindergarten, day-care, underground parking
Photo	Philip Heckhausen

Four differently angled, long building rows running parallel to the terrain's slope create nearly horizontal outdoor spaces that act as circulation and meeting places / All the townhouses in rows 2 and 4 as well as all ground floor apartments in rows 1 and 3 have access to a private garden / Carefully placed gaps in the rows connect the residential areas with one another / All apartments offer a generous patio facing the South and have living spaces that extend through the width of the building, offering views of the city to the North.

## Housing Development Chriesimatt, Baar

Collaboration with Ghisleni Partner AG	
Commission	study compet. 2003, 1 <sup>st</sup> prize
Realization	2007–2009 + 2012–2014
Client	private
Program	171 (99+72) apartments, parking, park
Photo	Walter Mair

Two long segmented rows of multi-angled and height-staggered apartment houses create an interior space that opens to the landscape in the south / Different sorts of trees and shrubs with varying colors and flowers give life to a „magic forest“, in which private gardens are partially embedded / A wide-range of apartment types is integrated into a single architectural language / The pearl and coral colored loggias and windows contrast with the darker sepia hue of the plastered building volumes.

## Waste Incineration Facility and Powerstation Forsthaus, Bern

Commission	competition 2005, 1 <sup>st</sup> prize
Realization	2008–2013
Client	ewb Energie Wasser Bern
Program	refuse incineration facility, wood/gas-steam combined station, offices, visitor center
Photo	Hannes Henz

Resembling a container ship anchored at

harbor, the building is placed on the outskirts of Bern / To accommodate future changes in the process technology, the construction of the building needs to be durable and at the same time flexible / The base and waste bunker are made out of in-situ concrete, the halls of the process technology are constructed as a tectonic shell out of pre-cast concrete elements / By allowing precise views into the process technology and thanks to generous openings to the surrounding forest, the promenade establishes a relationship between „machine“ and nature.

## Residential Development Schönberg Ost, Plots A/C, Bern

Collaboration Masterplan: H. Kollhoff, Rotkreuz/Berlin, and Büro B, Bern, 2002/03	
Commission	workshop upon. invit. 2008
Realization	2009–2011
Client	private (3x) / Steiner AG (1x)
Program	4 city villas (30 condominium.)
Photo	Hannes Henz

Grabner Pulver reinterprets the specific characteristics of Bernese roof design and translates them into a new language / A delicately divided framework in precast concrete frames the openings, structures the facade and gives them a strong plasticity / Open corner loggias give a strong identity to the building – due to their changing play of light and shadow.

## Vocational School GIBB Viktoria, Bern

Commission	open comp. 2004, 1 <sup>st</sup> prize
Realization	2009–2011
Client	Canton of Bern
Program	class rooms, laboratories, cafeteria, offices; renovation and conversion exist. building
Photo	Walter Mair

A new angular building takes the floor height and typology of the existing school building

by Otto Lutsdorf (1906) and complements it to a new overall shape / The new building divides the existing outside space into three different courtyards with different uses: the central atrium, the connecting schoolyard and a public garden / Inside, an operationally beneficial circulation system is established / Pre-fabricated, pigmented concrete elements form the relief of the new facade and act as an intermediary to the plastically formed existing sandstone facade.

## Vocational Training Centre EMF, Fribourg

Commission	open comp. 2003, 1 <sup>st</sup> prize
Realization	2007–2011
Client	Canton of Fribourg
Program	classrooms, ateliers, work shops, auditorium, cafeteria, offices, gym, parking
Photo	Georg Aerni

New apprentice workshops for technical and industrial professions / The long stretched, horizontal volume is embedded into the large scale context of the former industrial area and is in close dialogue with the verticality of the high rise building at the junction / A continuous form over the length of the building expresses the distribution of uses with workshops on top / The expressive section and the linear internal organization lend the peculiarity of a metal profile or a workpiece to the volume / The serial order, the construction and the materialization give the project an industrial imprint.

## Glarisegg Boarding School, Steckborn

Commission	competition 2004, 1 <sup>st</sup> prize
Realization	2006–2007
Client	Foundation Glarisegg
Program	3 apartments (for 10 adolescents each incl. caregiver), janitor apartment
Photo	Walter Mair

The one to two storey building is subjugated to the medieval main building and, with its angular shape, forms an exterior space with access from the lake side and a garden to the south / Rooms arranged in groups create three housing units and divide the open, commonly used living, eating and playing area / A manifold of diagonal spatial relationships offer each unit views to other housing groups, the lake and the garden / The plastically shaped wooden facade is reminiscent of rural barns or simple accommodations such as youth hostels.

## Rondo Apartment House, Zurich

Commission	direct commission 2004
Realization	2005–2007
Client	Rondo-Bau GmbH, Kloten
Program	multi-family house with 22 condominiums
Photo	Walter Mair

The irregular pentagonal geometry of the building is derived from the shape of the

plot, allowing its ideal use / The attractive staircase inside the vertically lit atrium lends a strong interior identity to the building / All the apartments are located in the corners and offer closed bedrooms and open living rooms / In contrast to the plastically formed, crystalline interior, the outside appearance is shaped by translucent, smoothly curved fabric made out of chrome nickel steel.

## Leopard Pit Dählhölzli Zoo, Bern

Commission	competition 2005, 1 <sup>st</sup> prize
Realization	2006
Client	City of Bern
Program	outdoor enclosure for Persian leopards (600 m <sup>2</sup> ), stables, feeding boxes
Photo	Walter Mair

The structure of the cage is part of a new landscape / A hem-like band of concrete surrounding the cage acts as the backdrop for the artificial landscape, becomes the roof of the glazed window in the foreground and also anchors the textile-like net of chrome steel in the ground / The netting is supported by five oak trees and, in return, stabilizes them / In varying light, the net appears to be a fog over the landscape, a cobweb over trees, or – thanks to its curved contours – resembles the hilltops of Persia.

## School Haltenstrasse, Niederscherli

Commission	competition 1993, 1 <sup>st</sup> prize
Realization	2004–2005
Client	municipality of Köniz
Program	classrooms, multipurpose room, kindergarten
Photo	Hannes Henz

The school building is embedded across the sloping hillside, creating a 3 storey facade downslope and a 2 storey facade upslope, thereby differentiating the surroundings:

The lower square space is facing the village, the upper area has the more intimate character of a garden / A column arcade spanning both stories appears intricate, and provides hints of a garden space / The classrooms on the ground floor extend through the whole width of the building, allowing light to enter from the west as well as the east / The upper floor classrooms are accessed by a corridor designed as a three-sided glass volume / The columns were pre-fabricated from smooth white cement while the wall surfaces were executed in sandblasted exposed concrete.

## Residential Development Chilehügel, Etappe 1, Birmensdorf

Cooperation with Martina Hauser, Zurich	
Commission	study compet. 1999, 1 <sup>st</sup> prize
Realization	2003–2004 (incl. development of a design plan)
Client	private
Program	2 semi detached houses
Photo	Stephan Baumann

The masterplan provides for 50–60 apartments that follow the natural contour of the hill in a parallel orientation / Through a slight staggering of the houses further up the hill the permeability of the built structure is underlined and the character of the „Chilehill“ as a greenbelt is preserved / In the first phase two semi detached houses, each with two duplex apartments back to back, are constructed / The local typology of the free-standing house with gabled roof has been adopted / The facades are clad in high-quality, evenly weather native chestnut wood.

## Holiday Residence, Montana

Commission	direct commission 2002
Realization	2002–2003
Client	private
Program	vacation home
Photo	Hannes Henz

*The form of the building's envelop develops out of the volume, tying together openings like the sliding shutters in an overall organizing principle that lends the house a peaceful composure / In the middle floor, a veranda which cuts over the whole length of the building extends the interior towards the valley / On the top floor, a gallery spanning the depth of the building offers views of the impressive landscape / The prefabricated raw larch lining elements of the supporting structure references the regional woodworking traditions.*

## Residential and Commercial Building Eilgutareal, Biel

Commission	competition 2000, 1 <sup>st</sup> prize
Realization	2001–2002
Client	Parking Biel AG/City of Biel
Program	shops, offices, apartments, access to the parking garage
Photo	Hannes Henz

*The new building finishes the edge of the city block on Biel's station square and dis-*

*tinctively terminates it to the edge of the plot and railway tracks / The characteristics of the existing railway buildings – proportions, orders, materiality – are picked up and newly interpreted / The main entrance with an adjacent retail store and a underground parking lobby spanning the width of the building are located on the ground floor / A hard, smooth lime plaster with added marble powder give the building its appropriate refinement and is reminiscent of polished natural stone slabs that are often used in the neighborhood as a base area cladding.*

## School Bachtobel, Zurich

Commission	competition 1999, 1 <sup>st</sup> prize
Realization	2001–2002
Client	City of Zurich
Program	classrooms, gym, kindergarten, day nursery; renovation existing building
Photo	Heinrich Helfenstein

*Through an angling and together with a staggering of the height, the building volume is modulated and lies as smoothly in the landscape as the existing buildings / The big windows openings of the two-sided classrooms partially allow the view through the building to the opposing Zürichberg / This spatial disposition is possible thanks to a special access system based on a generously dimensioned corridor in the middle floor – a kind of spine. From there all areas on the floor above and below can be accessed individually by ascending and descending stairs.*

## Forum Expoagricole, Expo 02, Murten

Commission	direct commission 1999
Realization	2000–2002 (disassembled)
Client	Association Expoagricole
Program	exhibition and event hall
Photo	Hannes Henz

*The Forum was built to provide a gathering and event space as well as an arena for agricultural associations with a grandstand, a podium and small catering infrastructure / Formally, the construction resembles wide-meshed, rural basketworks or traditional fences made of elaborately woven branches / The filigree structure presents itself with varying porosity in accordance to the direction of the laminated wood planks framework / Six trusses span the building, the walls and ceiling brace each other, whereby the overall stability is only reached with the final connection.*

## Vocational Training Centre LWB Felsenau, Bern

Commission	competition 1995, 1 <sup>st</sup> prize
Realization	1999–2000
Client	City of Bern
Program	workshops, laboratories, cafeteria, offices, depots
Photo	Hannes Henz

*By placing the new apprentice workshop building in front of the re-vitalised halls of the old spinning mill, a prominent endpoint is marked and a generous outside space and entrance were created / Cutouts in the volume give the building its plasticity and accentuate the location of skylights or structural glazing / Key to the spatial understanding of the project is the generous lobby on the entry floor that offers a view over the roof landscape of the existing facility as well as the surrounding landscape.*

Competitions are our passion. Over last years, we could evaluate a wide range of relevant questions in different scales under laboratory conditions – from urban planning to single objects. We thrive in the design process in the force field between systematic research and associative creativity, the derivation of sustainable solutions and a coherent narrative from context and program. To develop typologies, spatial-structural concepts and ultimately an architectural language is our inner drive.

For the continuation of our building culture, competitions are an indispensable basis; and they are equally important for our office. We acquire 95 % of our work through competitive procedures. We participated in more than 180 competitions, studies, or planner evaluation procedures. We could win 40 procedures and were awarded about 40 additional distinctions for urban and large-scale developments, stadiums, hospitals, universities, indoor-pools or museums.
